Active natural gas capacity (136 GW, +72% year-over-year) increased in 2024, while solar (956 GW, -12%), storage (890 GW, -13%), and wind (271 GW, -26%) capacity decreased. 408 GW of capacity ...

Energy storage installations in the United States continue to grow as the share of intermittent renewable energy generation from sources like solar and wind expands, presenting a ...

In 2025, capacity growth from battery storage could set a record as we expect 18.2 GW of utility-scale battery storage to be added to the grid. U.S. battery storage already achieved record growth in 2024 ...

Solar, wind, and storage accounted for 77% of all new power capacity installed. Utility-scale solar installations soared to 19.6 GW, with utility-scale projects leading the expansion. Energy ...

Dozens of large-scale solar, wind, and storage projects will come online worldwide in 2025, representing several gigawatts of new capacity.

The fact that "the wind doesn't always blow, and the sun doesn't always shine" is often used to suggest the need for dedicated energy storage to handle fluctuations in wind and solar production.

- The 3GW project co-locates storage with solar facilities, leveraging existing infrastructure to reduce costs. - Despite 58% gas-heavy 2025 IRP, critics warn of stranded assets and climate ...

Despite massive capacity additions, wind and solar curtailment rates have remained stubbornly high in northwestern China. Moreover, reliance on fossil fuel-based backup capacity ...

Grid flexibility: role of storage durations, virtual power plants, demand response, and dynamic line rating to absorb variable renewables Hybridization trends: solar-plus-storage and wind ...
