What are the 5 key synchronisation challenges specific to base stations? In this post we will identify the critical challenges in macro base station synchronisation and what needs to be considered when ...

The Finnish Transport and Communications Agency Traficom has revised its regulation on critical parts of communications networks. The revised regulation extends the scope of regulation ...

However, in 5G systems with new physical layer techniques and the highly heterogeneous network architecture, new challenges arise in the design of BS ON-OFF switching strategies. In this article, ...

5G communication performance is highly correlated with the locations of cellular base stations (BSs). Many previous works have studied the placement of BSs, how.

An effective military 5G infrastructure cannot exist without secure links able to resist enemy attempts to jam, disrupt, eavesdrop, or hack into sensitive communications.

This research examines the feasibility of using synchronization signals broadcasted by currently deployed fifth generation (5G) cellular networks to determine the position of a static...

This Ericsson Technology Review article explains 5G synchronization requirements and the solutions that enable an efficient and cost-effective implementation.

In this month's article, the authors provide us with an overview of the development of 5G Sidelink, scenarios, challenges, technical approaches, co-existence with adjacent wireless ...

Explore how 5G base stations are built--from site planning and cabinet installation to power systems and cooling solutions. Learn the essential components, technologies, and challenges ...

5g cannot use communication base stations

In NSA networking, 5G base stations cannot be deployed independently, requiring LTE base stations to be used as anchor points on the control plane for access to the core network.
