Could solar panels be a form of technosignature that would enable us to detect alien life on a distant planet?

I was cleaning my solar panels yesterday when I came across these green lines. Some are interconnected, branching off each other and are definitely green in color.

Scientists from NASA have published the results of a study on the possibility of detecting arrays of solar panels created by an advanced extraterrestrial civilization. The researchers concluded ...

Technosignatures are signs of alien technology. Astronomers have spoken of trying to detect large-scale solar panel arrays on an alien planet's surface, or star-energy-gathering...

Though it currently appears that detecting solar panels is implausible, it can't be ruled out. In the search for potential civilizations -- which may be quite rare in any galaxy or maybe not...

Silicon solar panels could be widely used on their planetary surfaces. Could their mass implementation constitute a detectable technosignature? The authors of a new paper examine that ...

NASA has not found any credible evidence of extraterrestrial life but is exploring the solar system and beyond to help us answer if we are alone in the universe.

NASA explores the possibility of detecting aliens utilizing solar power. Learn more about their research findings in this article now.

Imagine silicon solar panels covering vast areas of distant planets, creating technological signatures detectable by our telescopes. This intriguing possibility has been explored by NASA ...
