Can electric vehicles be used in municipal fleets?

The City of Cape Town Fleet Management Department's electric vehicle pilot project has demonstrated a business case for the procurement of electric passenger vehicles for municipal fleets. Electric vehicles (EVs) used in municipal fleets can reduce greenhouse gas (GHG) emissions, improve air quality in cities and save on fuel costs.

How will the new electric bus fleet impact Cape Town?

The new electric fleet is expected to transform daily commutes, lower environmental impact, and set a new standard for urban mobility across the country. The City of Cape Town has partnered with global electric vehicle leader Volvo to deploy the electric buses as part of its Golden Arrow Bus Services (GABS).

Are electric vehicles the key to sustainable mobility in Western Cape?

In the public transport sector, the shift to electric vehicles is critical to achieving sustainable mobility for commuters and creating economic opportunities and job creation in various sectors of the province" said Isaac Sileku, Western Cape Minister of Mobility.

What does Cape Town's electric bus move mean for the environment?

Cape Town's R2 billion electric bus move is more than just a transport upgrade -- it's a bold statement on the city's environmental and commuter priorities. With 30 state-of-the-art Volvo EVs set to revolutionize travel in major routes, residents can expect a cleaner, quieter, and more efficient commute by 2026.

The EV pilot project showed that the purchase price plus operational costs of electric passenger vehicles are more affordable than its internal combustion engine vehicle equivalent.
