Discover Siemens Energy's concentrated solar power solutions: reliable steam turbines, advanced I& C, and thermal storage for round-the-clock renewable power.

Concentrated solar power (CSP) technology is a promising renewable energy technology worldwide. However, many challenges facing this technology nowadays. These challenges are ...

OverviewHistoryComparison between CSP and other electricity sourcesCurrent technologyCSP with thermal energy storageDeployment around the worldCostEfficiencyA legend from later centuries has it that Archimedes not only used the Claw of Archimedes, but also a "burning glass" to concentrate sunlight on the invading Roman fleet and repel them from the Siege of Syracuse (213-212 BC). In 1973 a Greek scientist, Dr. Ioannis Sakkas, curious about whether Archimedes' heat ray could really have destroyed the Roman fleet in 212 BC, lined up nearly 60 Greek sailors, each h...

Concentrating Solar Power Update NREL is moving to 100-kW demonstration in an ARPA-E-funded 100-hour thermal energy storage project in sand. The technology has a 95% round-trip efficiency, ...

The Sulzer advantage Taking on new challenges he challenge to produce clean, dependable energy from renewable resources. Concentrated Solar Power Generation (CSP provides a sustainable ...

Concentrated Solar Power (CSP) is commonly used in regions that have high solar irradiance, such as deserts or near the equator. CSP systems are typically installed for utility-scale ...

Concentrating solar-thermal power (CSP) systems have many components that help convert sunlight into usable energy. In CSP plants, mirrors reflect and concentrate sunlight onto a focused point or ...

CSP plants generate electric power by using mirrors to concentrate (focus) the sun's energy and convert it into high-temperature heat. That heat is then channeled through a conventional generator.

Concentrated solar power generation equipment

Concentrated Solar Power (CSP) systems refer to the use of mirrors or lenses to concentrate sunlight onto a small area, which then generates heat to produce electricity.

Over the following years, inventors such as John Ericsson and Frank Shuman developed concentrating solar-powered devices for irrigation, refrigeration, and locomotion.
