How many EV charging stations does the EU-27 need?

Even in the latter, less aggressive scenario, by 2030 the EU-27 would need to scale up from its current 340,000 charging stations to the estimated 3.4 million public chargers required to meet the needs of its future EV fleet.

How long does it take to charge the same kWh?

Whether it takes 30 minutes or 2 hours to achieve the same kWh level of charge, both drivers will ultimately face the same cost for their charging sessions. When a business launches a charging network or expands it, fixed pricing can seem attractive to undercut the competition.

What is the tax credit for installing a charging station?

The tax credit for installing a charging station is the most advantageous aid for individuals. Set at EUR500 in 2025, it covers up to 75% of expenses within the limit. This aid applies without income conditions, whether you are an owner or tenant, for the purchase and installation of a controllable station in your main or secondary residence.

How much does Electra cost per kWh?

For public stations, the wide range of rates--from EUR0.20 to EUR0.79 per kWh depending on power and operator--offers solutions for every use case. Electra stands out with an innovative approach: its "Populaire" subscription at EUR19.99/month offers a rate of just EUR0.29 per kWh on ultra-fast stations up to 400kW.

Discover the price of an electric charging station: EUR500 to EUR2000 at home with a EUR500 tax credit. Public charging rates from EUR0.20 to EUR0.79/kWh. Our guide.

To go carbon neutral by 2050, Europe needs more electric vehicles on the road--and more EV charger installations. What will this build-out look like and what might it cost?
