---

Trivia: More than 1.6 million rooftop solar PV systems have been installed in Australia. These systems collectively represent more than 5.2 gigawatts of installed solar PV capacity. As a ...

These regional output estimates are summed to estimate the total generation from distributed PV systems in each State. Contribution to load is then calculated using data from the ...

The latest edition in our NEM Data Spotlight series delves into solar PV data from January 2026 and how it hit a daily peak of 222GWh.

In this guide, we'll break down average daily solar output across Australia: By system size, region, and season, while showing you how to estimate, monitor, and boost your own production.

IN AUSTRALIA The penetration of Australian rooftop photovoltaics (PV) in the energy market continues to grow and contributed roughly 15 per cent (approximately 8,172 GWh) of the National Electricity ...

This release includes household solar electricity generation in the Australian National Accounts (ANA) for the first time. Our new approach provides a more complete picture of the role of ...

Rooftop solar PV now accounts for 28.3 GW of installed capacity, eclipsing that of the country's entire fleet of coal-fired generators (22.5 GW). In the second half of 2025, rooftop solar ...

Daily consumed and imported energy are found to be increasing at a greater rate than indicated by one existing source. These results may be useful for understanding electricity demand ...

It is updated annually and consists of historical energy consumption, production and trade statistics. The dataset is accompanied by the Australian Energy Update report, which contains an overview and ...

# Daily electricity generated by solar energy in Australia

In addition to knowing the output rating of your solar power system, you should also understand how many (kilowatt-hours or kWh) your solar system can be expected to produce. ...
