Learn about the science behind wind blades and how they are designed to capture energy from the wind and turn it into electricity!

There is no direct evidence from which to draw any conclusions on an association between electromagnetic radiation produced by wind farms and health effects. The risk of blade glint ...

This paper presents the investigation of the effect of electron radiation or the combined action of this radiation and triallyl isocyanurate (TAIC) on the structural, thermal, and mechanical ...

To increase the wind velocity at the inlet of wind turbines, several methods can be employed, including the use of nozzles and solar radiation for the air inlet.

Here I will give a quickie overview of a radiation source that most people have never heard about. Lobbyists and other politically correct parties paint industrial wind energy as "free, ...

Multiple studies have found that the electromagnetic fields (EMFs) generated by wind turbines are lower than those generated by most common household appliances and that they easily ...

The location where the wind turbines are operated does not fully bear the radiological risks of wind technology. This finding should be considered in communication about wind energy and ...

The amazing conclusion is that over the lifetime of a wind project (20 years), wind energy produces more radioactive waste per MWH than a nuclear facility! So we've lifted another wind ...

Multiple studies have found that the electromagnetic fields (EMFs) generated by wind turbines are lower than those generated by most common ...

Shawn Frayne's Windbelt uses vibrating ribbons, not blades, to harvest wind efficiently on a smaller scale

Do the wind blades have radiation

where traditional turbines fail completely now.

Does Wind Blade Power Generation Cause Radiation? The Shocking Truth Unveiled Let's address the elephant in the room first: wind turbines don't emit harmful radiation.
