Wind energy is now again being used to power a variety of cargo vessels and ship concepts. Learn how these seven green ship technologies would help to harness wind power.

She covers stories on batteries, wind energy, sustainable shipping and new discoveries.

This paper has summarized new energy sources available for ships and reviewed progress in research regarding the integration of solar energy, wind energy and fuel cells with conventional ...

Explore the top 7 green ship concepts harnessing wind energy to cut emissions and reshape sustainable shipping. Learn about innovations like rotor sails, kites, and rigid wings, plus real-world applications ...

Cruise company Hurtigruten Norway has unveiled a design for a zero-emission ship that relies on wind and solar power.

PROPELSEAS develops and combines multiple zero-emission propulsion pathways -- wind, nuclear and solar -- each with its own role, impact and time horizon.

These hybrid powered ships will use wind and solar power together as a source of energy and propulsion (along with the ship's main engines or other form of propulsion) in order to reduce harmful ...

A European team of researchers is developing modular wind-solar hybrid and tilting wing wind power technology to reduce fuel consumption of long-distance cargo vessels in a three-year...

Battery-electric ships, wind-assisted propulsion, and solar-powered vessels are no longer prototypes or novelties. They are operational, investable, and increasingly essential to meeting both ...

This blog post explores how wind and solar energy are reshaping the future of shipping, the key technologies

Foreign solar and wind energy container ships

driving these changes, and the challenges that lie ahead.
