What are the different solar inverter sizes?

Solar generators range in size from small generators for short camping trips to large off-grid power systems for a boat or house. Consequently, inverter sizes vary greatly. During our research, we discovered that most inverters range in size from 300 watts up to over 3000 watts. In this article, we guide you through the different inverter sizes.

Do I need an inverter size chart?

The need for an inverter size chart first became apparent when researching our DIY solar generator build. Solar generators range in size from small generators for short camping trips to large off-grid power systems for a boat or house. Consequently, inverter sizes vary greatly.

How many Watts should an inverter be?

Ideally at 80-110%, to compensate for panel overproduction in bright sunlight and to avoid compromising inverter efficiency. 2. Select an Appropriate Inverter Rating Here's how inverter sizes usually correlate:  
Panels: 3,000-6,000W Inverter: 3,000W to 5,500W  
Panels: 6,000-10,000W
