No, wind turbines do not generate electricity when it's not windy. They also don't generate electricity when the wind speed drops below what's called the "cut-in-speed".

However, some people wonder how wind turbines keep generating electricity when there is no wind. This article will explain how this is possible using innovative ideas and advanced technologies.

Once a turbine is going, it can take hours to slow back down, and that could explain why they are turning without wind. They could also be drawing power from the grid to rotate the blades during cold periods of the year to ...

However, some people wonder how wind turbines keep ...

Curious about how wind turbines work when there's no wind? This article explains how turbines generate electricity, even when it's not windy outside!

These are some of the solutions that will help to ensure there's enough clean energy to meet demand, even when the wind isn't blowing and the sun isn't shining.

There's a way to use lots more clean energy AND have power when we need it. And it's already taking shape. Sharing, storing and shifting power lets us wave goodbye to giant polluting power plants...

There are wind turbines of many different sizes and purposes. Small wind turbines are used to charge batteries or provide power on boats, or for remote needs such as weather stations or ...

How do we ensure energy is available at all times - even when the sun doesn't shine and the wind doesn't blow. Read the expert take on this pertinent question.

# How to use wind power when there is no wind

Discover how new hybrid technologies and bladeless wind turbines make it possible to generate wind energy even without wind, improving performance and sustainability.

New technology allows us to rely on renewable energy regardless of the weather. Wind turbines work on a simple principle: instead of using electricity to make wind, like a fan, wind turbines ...
