Are plug-and-play inverters legal?

The plug-and-play inverters are lighter and connect to the solar panel directly through a standard socket. However, per the law, these inverters have been required to shut down during utility outages per the IEEE 1547. Consequently, there has been a lot of fuss over the internet about these devices, with everyone wondering if they are legal to use.

Can I replace my inverter myself?

The short answer to this is, if you're a reasonably competent DIYer, then yes, you can replace your inverter yourself. However, if you're unsure of any of the steps or there's something that doesn't tally with this guide, do not proceed and instead give us a call. Please also be sure that it is in fact your inverter that is at fault.

Are solar inverters safe?

Solar inverters are tested against AS 4777.2 and AS3100 to guarantee their safety. Unfortunately, the plug-in inverters require a dedicated circuit on the switchboard. Consequently, a lot of energy flows in and out of one circuit. As a result, the circuit can be damaged in case of a slight error, resulting in a fire.

Are plug-in inverters illegal?

Coupling with its safety concerns, these inverters are not licensed by a power utility company. Apart from that, they need dedicated circuits which violate the codes of most local power utilities. As a result, plug-in inverters are illegal in some areas.
