When should you install solar panels?

If you don't mind longer wait times and slightly higher installation fees and prefer to start bankrolling solar credits right away, you'll want to install solar panels during the summer. But if you're looking for shorter installation times and lower fees, you should wait for the spring or fall.

Is it a bad time to install solar power systems?

Overall, there is no bad time to install solar power systems, as you'll be making a major step toward paying lower electricity bills, producing clean energy, and improving the value of your home. But, there are times throughout the year that installations are less optimal.

What happens if you install solar panels too late?

If you install your solar panels too late, you may be ineligible for certain incentives, or incentive programs will change their rates for the new year. If you want to get the most out of your solar panel system, you'll want to install it before the year ends to maximize the amount you get from solar incentives and federal tax credit programs.

Are solar panels a viable option?

Solar panels are more affordable now than ever, with prices dropping by as much as 70% since 2014. On top of that, many states are now offering lucrative incentives for homeowners who go solar. As a result, renewable energy systems and solar panels are a viable option for many homeowners for the first time since their inception.

Discover the real benefits, pros, and cons of solar panels in 2025. Expert analysis, cost breakdowns, and decision framework to help you choose wisely.
