This study proposes a simple mixeddroop-v/fcontrol strategy for ...

In this paper, a new control strategy based on master-slave approach is proposed for islanded HMGs. In this method, one of the sources of each MG (ac and dc MG) is assigned as the master and the ...

The aim of the master-slave architecture is to enable low-voltage grids to efficiently support the functionalities of smart microgrids, such as high distribution efficiency, demand response, ...

As distributed generation systems are increasingly integrated on a large scale, research into microgrid control is becoming increasingly vital. The microgrid cl.

To solve this problem, a decentralized multilayer master-slave control strategy is proposed. In the selected master DGU, an ac signal is injected into the output voltage, and power information is ...

In this paper the master-slave control strategy in the dq frame is presented. The reference current signals are sent from the master to the slave ...

For a more in-depth analysis of the impacts of this scenario, this paper contributes with a proposal to modify the strategy for identifying possible intentional islanding.

To balance the production power and loads in a smart island with a stable voltage/frequency, a hybrid backstepping sliding mode controller (BSMC) with disturbance observer (DO) is suggested to control ...

Abstract: The stable operation of a microgrid is crucial to the integration of renewable energy sources. However, with the expansion of scale in electronic devices applied in the microgrid, the interaction ...

Abstract--In this paper a design of a master-slave microgrid consisting of grid-supporting current source

inverters and a synchronous generator is proposed. The inverters are following the frequency of the ...

In this paper the master-slave control strategy in the dq frame is presented. The reference current signals are sent from the master to the slave converters. A model for master-slave...

This study proposes a simple mixeddroop-v/fcontrol strategy for the master inverter of a microgrid to achieve seamless mode transfer between grid-connected and autonomous islanding ...
