The invention provides a micro-grid control method, which is used for solving the technical problem of complex micro-grid power control in the prior art.

The invention relates to a method for controlling an electrical distribution microgrid comprising at least one renewable power source, delivering, to the microgrid, a first active/reactive power that is ...

Search on patent applications for microgrid control technology was conducted on a global scale, analyzing the development lifecycle, main applicants, technology development direction, important ...

[0001] The present disclosure relates to methods and devices for controlling a microgrid comprising a plurality of distributed generators (DG) which are connected in said microgrid.

The present disclosure relates to a control method in an electrical microgrid having multiple points of common coupling (PCC) with one or several other electrical power grid (s).

Centralized control of a microgrid involves a large amount of information being transmitted to a central controller before a decision can be made regarding which power units to activate or deactivate, and ...

A microgrid self-triggering control method and system for resisting FDI attacks is provided.

Thus, there is a need for apparatuses and methods to efficiently control microgrid assets, including generation, storage and load assets. A microgrid controller may control the generation,...

The invention relates to a microgrid control method. According to the method, the first critical power value of the over demand for electricity at the grid-connected end and the second ...

The present application discloses a microgrid control method and apparatus, a microgrid, and a storage
