Developed within the Montenegro Energy Growth and Acceleration (MEGA) project, the analysis identifies low-conflict areas with high renewable energy potential across the country.

Montenegro's CEDIS will modernise substations, install smart meters, and improve grid reliability through EUR30 M investment and major international funding.

The project is set to reduce technical losses by 10%, significantly decrease grid outages, integrate renewable energy sources, and strengthen cybersecurity. This initiative aligns with EU standards ...

The Government of Montenegro has adopted a list of priority infrastructure projects for the energy sector to fulfill the final criteria of chapter 21 - Trans-European Network, of the country's negotiations on the ...

Montenegrin distribution system operator (DSO) CEDIS has secured funds for the installation of an advanced grid management system and procurement of smart meters.

It aims to reduce technical losses by 10%, cut grid outages to about one-sixth of the current level, while allowing new renewable energy sources to be integrated into the grid and enhancing cyber security.

While previous versions only covered the central and southern parts of Montenegro, the updated two-phase implementation of SCADA/ADMS, with a total value of EUR25 million, will encompass the entire ...

This project will, among other benefits, reduce technical losses by 10 per cent, reduce grid outages to approximately one-sixth of the current level, allow new renewable energy sources to be integrated ...

The funds will facilitate the installation of an advanced SCADA/ADMS system and the deployment of smart meters across the country, marking a crucial step in the digitalisation of Montenegro's energy infrastructure.

The Montenegro electricity sector will continue efforts to modernize and innovate through a \$35.7 million

Montenegro smart grid

project financed by the European Bank for Reconstruction and Development (EBRD) in which 85 percent of
