Increasing amounts of battery storage capacity help to support the fluctuations in solar output during the day. The electric power sector plans to expand battery capacity in ERCOT from ...

Curtailement is increasingly prevalent in high-penetration markets, underlining the need for grid flexibility, storage, and new business models. PV represented more than 75% of all new renewable generation ...

In 2024, PV accounted for 14.5% of net electricity generation and all renewable energies for around 62%. In 2024 GHG emissions of about 51 million tons CO2 equivalents were avoided due to 74 TWh ...

The US Energy Storage Monitor is a quarterly publication of Wood Mackenzie Power & Renewables and the American Clean Power Association (ACP). Each quarter, new industry data is compiled into this ...

MITEI's three-year Future of Energy Storage study explored the role that energy storage can play in fighting climate change and in the global adoption of clean energy grids.

The previous editions and complete electricity generation and capacity dataset from 2000 onwards are available for download on the Data and Statistics web pages.

What is the least-cost portfolio of long-duration and multi-day energy storage for meeting New York's clean energy goals and fulfilling its dispatchable emissions-free resource needs?

We expect 63 gigawatts (GW) of new utility-scale electric-generating capacity to be added to the U.S. power grid in 2025 in our latest Preliminary Monthly Electric Generator Inventory ...

The use of distributed solar PV applications with storage units is also growing in countries that have an unreliable electricity grid. In South Africa and Pakistan, for instance, uptake in commercial and large ...

Photovoltaic energy storage power generation report

The use of storage can change and customize the "shape" of PV production to better match load and peak demand in many power systems, make PV generation more flexible, and facilitate very high ...
