The PV poverty alleviation effect is stronger in poorer regions, particularly in Eastern China. Our results are robust to alternative specifications and variable definitions.

Heterogeneity analysis shows that providing public welfare jobs and direct photovoltaic (PV) subsidies are the most effective ways to promote clean energy transition for rural households.

China plans to cover as many as half of its new buildings that are classified as public institutions with rooftop solar panels by 2025, according to a statement jointly released by the NDRC ...

In short, rural residential PV systems possess the capacity to effectively lower electricity costs, stimulate energy conservation, reduce emissions, and offer a practical and economically efficient solution for ...

Solar energy will be a game-changer in China's rural regions, offering a reliable and affordable answer to local energy demands while facilitating the green energy transition nationwide, according to national ...

China's rural "solar villages" show how distributed renewables can boost incomes and local infrastructure - even as grid constraints and fading subsidies test the model's long-term ...

Furthermore, the abundance of rooftop space in China's rural areas, coupled with well-defined ownership rights, makes these regions particularly suitable for the expansion of distributed ...

Bathed in radiant sunlight, the rooftops of Dongshan Village on the Qinghai-Tibet Plateau gleam with solar panels that are helping transform local livelihoods while driving green development...

China has promoted replacement of dirty coal heating in rural areas. More recently China has also begun promoting distributed solar photovoltaic (PV) energy as a rural development strategy, ...

Photovoltaic panels in rural Northeast China

The results show that currently the photovoltaic power generation technology is relatively mature and widely applied, and passive photovoltaic technology can play a greater role in reducing ...
