What is Renewable Energy? Renewable energy is energy generated from natural resources--such as sunlight, wind, rain, tides and geothermal heat.

The term "renewable" encompasses a wide diversity of energy resources with varying economics, technologies, end uses, scales, environmental impacts, availability, and depletability.

Renewable energy, usable energy derived from replenishable sources such as the Sun (solar energy), wind (wind power), rivers (hydroelectric power), hot springs (geothermal energy), ...

Renewable energy is energy from sources that are naturally replenishing but flow-limited; renewable resources are virtually inexhaustible, but they are limited by the availability of the resources.

Renewable energy sources, also known as clean energy or sustainable energy, harness the power of the sun, wind, water, Earth's heat, and biomass. These sources are constantly ...

Renewable energy (also called green energy) is energy made from renewable natural resources that are replenished on a human timescale. The most widely used renewable energy types are solar energy, ...

With businesses under increasing pressure to reduce greenhouse gas emissions and with regulatory oversight tightening, investing in renewable energy has never been more important. ...

Renewable energy is the type of energy that is obtained from natural resources that can be continuously replenished or regenerated. Examples include solar energy, wind energy, ...

Solar, wind, hydroelectric, biomass, and geothermal power can provide energy without the planet-warming effects of fossil fuels.
