To access additional data, including an interactive map of global solar farms, a downloadable dataset, and summary data, please visit the Global Solar Power Tracker on the Global Energy Monitor website.

We provide an overview of factors affecting solar PV power forecasting and an overview of existing PV power forecasting methods in the literature, with a specific focus on ML-based models.

"Distributed" solar power generation on roofs of houses, factories and airports is spreading across country, but curtailment rate is also rising.

Here we assess the deployable potential of RPV across 367 Chinese cities by incorporating variations in building types, regional characteristics and policy limitations. Our findings reveal that...

This study evaluates the PV generation potential and economics of 20 cities in China under three shadowing conditions. First, the building geometry models under three shadowing conditions for the 20 cities ...

This is the latest government effort in promoting rooftop solar capacity construction, after China carried out a pilot program to develop rooftop solar ...

Rooftop photovoltaics (RPVs) are crucial in achieving energy transition and climate goals, especially in cities with high building density and substantial energy consumption.

Photovoltaic (PV) power generation is booming in rural areas, not only to meet the energy needs of local farmers but also to provide additional power to urban areas.

China installed a record 60 gigawatts (GW) of new solar photovoltaic (PV) capacity in the first quarter of 2025 - the highest ever recorded in a first quarter in the country's history, according to Rystad ...

Rooftop photovoltaic system plays an important role in solar energy power generation especially in urban. In this paper, we present an assessment method for the PV power generation potential of rooftop in ...

Rooftop photovoltaics (RPVs) are a corner-stone of the renewable energy transition. In China, adoption has grown rapidly, requiring an evaluation of not just technical capacity, but also...
