We drive innovations in solar photovoltaics including optoelectronics for our net-zero future, sustainable power generation in space, green-production of clean hydrogen, and bio-inspired novel nano ...

SPF2050 is catalyzing breakthrough pre-competitive research for the solar power industry by enabling close and sustained engagement between industry innovators, world-class academic teams, and ...

Our lab develops materials and strategies for three approaches for harnessing solar energy: 1) photovoltaics, 2) solar-to-fuel conversion, and 3) solar photocatalytic chemical transformations.

Ministry of New & Renewable Energy (MNRE) supports Research, Development and Demonstration (RD&D) to develop the technologies, processes, materials, components, sub ...

The objectives reflect EPRI's commitment to supporting an evolving power sector by focusing on cost optimization, reliability, decarbonization pathways, and the deployment of advanced technologies ...

Access to world-class solar power research teams and their extensive research networks across many universities, national labs, international partnerships and industry partners.

Explore each of the research areas below and the research topics within them. You can also learn about the basics of solar energy and find solar energy resources.

Our group focuses on developing and optimizing novel systems/processes to provide the energy requirements in the desired forms (transportation fuel, fertilizer, chemicals, electricity, heating) using ...

Solar energy in the United States is booming. Along with our partners at Wood Mackenzie Power & Renewables, SEIA tracks trends and trajectories in the solar industry that demonstrate the diverse ...

NLR conducts solar market research and analysis, gathering datasets and developing tools, to inform the

Solar Power Generation Research Group

efficient and affordable adoption of solar energy to benefit industries and ...
