Our solar system includes the Sun, eight planets, five officially named dwarf planets, hundreds of moons, and thousands of asteroids and comets. Our solar system is located in the Milky Way, a barred ...

The Solar System provides the only known example of a habitable planet, the only star we can observe close-up, and the only worlds we can visit with space probes. Solar System research is essential for ...

The Solar System remains a unique natural laboratory for exploring the processes that govern planetary formation, evolution and dynamics.

Solar System, but each came from different solar systems. Based on what you have learned about gravitational interactions, provide an explanation for how these objects were able to leave their solar systems. Since the ...

Classify newly-discovered Solar System objects by analyzing their orbital properties. Want a deeper dive into Surveying the Solar System? Watch this webinar. Examine implementation materials and learn about ...

Solar system, assemblage consisting of the Sun and those bodies orbiting it: 8 planets with more than 400 known planetary satellites; many asteroids, some with their own satellites; comets and other icy ...

Rubin Observatory is going to discover thousands of new Solar System objects. How will we know if these objects are part of a group of small Solar System objects that already exist or if they are a brand new type of ...

Solar System, but each came from different solar systems. Based on what you ...

You will explore the orbital properties of small Solar System objects and assign them to categories of objects sharing specific properties. This is an online lab developed by the Vera C. Rubin Observatory, a new major ...

Studying the planets and other celestial bodies in the space around us. NASA's Planetary Science Division brings a variety of scientific disciplines - including geology, chemistry, astronomy, physics, ...

Solar System Investigation

From the Moon and Mars to distant bodies like Bennu, Titan, and celestial realms beyond, Goddard scientists systematically investigate the solar system and planetary systems throughout the cosmos, advancing ...
