Thanks to its cool climate, abundant land, and solar radiation levels on par with northern Germany, Finland is unexpectedly well-suited to solar - especially when paired with wind, which peaks in winter ...

The price of solar panel systems has plummeted in recent years, making panels financially viable even without support schemes. Mechanisms such as these have motivated ...

Solar power in Finland is contributing to the transition towards low-emission energy production. Technological development, falling costs and climate goals have together accelerated ...

Solarvance offers solar systems that are climate-adapted, snow-load ready, and smart-grid compatible --tailored to meet Finland's demand for reliability, energy efficiency, and sustainability. We're proud ...

Finland's large-scale solar capacity more than doubled in 2025, buoyed by the commissioning of the country's first solar projects larger than 50 MW. Another record year for ground ...

Finland is undergoing a major energy transition. Moving away from imported fossil fuels and towards local, clean energy production will create the basis for new industrial investment. In addition to wind ...

Solar energy in Finland is used primarily for water heating and by the use of photovoltaics to generate electricity. As a northern country, summer days are long and winter days are short. Above the Arctic Circle, the sun does not rise some days in winter, and does not set some days in the summer. Due to the low sun angle, it is more common to place solar panels on the south side of buildings instead of on the r...

Official data covering Finland's smaller-scale solar installations in 2025 is yet to be published. Last June, the Finnish Energy Authority said Finland's cumulative solar capacity reached ...

Explore the rapid growth of solar power in Finland, backed by EUR16.6M in subsidies. See how Finland's solar energy strategy is paving the way to carbon neutrality.
