Projected build-out of solar energy resources to achieve SB 100 goals Senate Bill 100 (De León, 2018) sets a 2045 goal of powering all retail and state agency electricity sold in California with renewable ...

Explore agrivoltaic systems for crop production in California. Boost farm sustainability, enhance crop yield, and generate renewable energy with solar power.

A new agrivoltaic project in California will incorporate solar grazing as well as renewable energy production and storage.

Our study of nearly 1,000 solar arrays built on 10,000 acres of the Central Valley over the past two decades found that solar power and farming are complementing each other in farmers"...

California leads the nation in both agriculture and solar power generation while continuing to expand its energy portfolio. While California is a leader in traditional solar technology, ...

Solar farms are viewed as a critical component in combating climate change; they provide clean electricity without emitting greenhouse gases. Yet, under the Williamson Act, converting ...

A new initiative in California will repurpose farmland that is no longer able to sustain agriculture. The arid land will be used to build large solar farms, providing renewable energy to...

Solar is helping farmers in California save water and secure reliable income in the face of drought and economic pressure.

Running a California farm can cost a lot, but it's affordable with the right investments. Here's how solar power saves your California farm money.

Solar power generation on California farms

OverviewGovernment supportHistoryPhotovoltaicsSolar thermal powerGenerationState challenges with solar powerPublic opinionSince 1980, the state government excluded solar installations as taxable improvements on a property. This has resulted in many counties seeing no tax benefit from solar farm installations, with some like Kern County stating that they had lost \$110 million in property taxes over a decade due to this policy. State legislators felt that the policy was necessary because otherwise the property taxes on solar farms would be four to seven times higher in California than neighboring states, and would thereby incentive ...

Below is a table of annual and monthly utility-scale solar generation, including thermal and PV generation, alongside the percentage of total annual CA energy generation and percentage of all US ...
