How can on-site solar PV & energy storage improve sustainability?

To achieve sustainability goals while meeting the increasing electricity demands of electrification, organizations are pairing on-site solar PV generation with on-site energy storage. These systems, which are considered as "behind-the-meter" (BTM) systems, allow facilities to maximize the benefits of on-site renewable generation.

Where did srne showcase its latest solar energy solutions?

SRNE showcased its latest solar energy solutions at the K.EY 2024 exhibition in Rimini, Italy. The company presented cutting-edge solar inverters, smart energy storage systems, and integrated photovoltaic solutions, emphasizing innovation and sustainability.

Can on-site storage be used alongside solar PV?

If a utility restricts the exports from a facility to the grid, the use of on-site storage alongside solar PV can provide a solution to avoid costly infrastructure upgrades, thus increasing the feasibility of larger on-site PV installations.

Can solar PV & electrical storage be combined?

Ultimately, the ideal combination of thermal and electrical storage will be dependent on the utility restrictions and the end uses at the facility. Finally, the use of on-site solar PV and a larger storage system can complement each other to largely eliminate the need for grid-supplied electricity.
