In this context, the EU-funded Air4NRG project aims to improve long-term energy storage. Specifically, it targets over 70 % round-trip efficiency, sustainability, and integration with the grid.

Israel's Augwind Energy has announced plans to build the world's first commercial-scale AirBattery energy storage facility in Germany, marking a major breakthrough in the race to ...

Energy Storage Europe engages with leading stakeholders across the energy sector to explore the ideas driving Europe's energy transition.

When the wind stops blowing or the sun stops shining, we have to store energy. That's why we're developing compressed air projects which store energy at scale and for days, not just hours. This ...

This video offers an in-depth look at Chapter 4: Liquid Air Energy Storage (LAES), drawing from the cutting-edge research of the Interreg Danube Region's StoreMore project.

This project will combine advanced research on the isothermal compression/expansion process with the development of a robust, industrial-grade gas compressor stored in a containerised form factor to ...

The selected projects range from large-scale battery systems to industrial thermal storage and new pumped-hydro plants, reflecting both the technological maturity of the sector and ...

Air4NRG is a European project developing innovative isothermal compressed air energy storage (I-CAES) technology to enhance renewable energy storage, reduce reliance on critical raw ...

Air4NRG aims to revolutionise energy storage by leveraging isothermal compression-expansion technology. The project will provide robust, safe, and scalable energy storage solutions, using local ...

Southern europe air energy storage project

Compressed air reservoirs use electricity from renewable sources to compress air - this stores the energy. In an old mountain tunnel in the Ticino Alps, a group of researchers have successfully tested ...
