In April 2025, a sharp power outage hit parts of southern and central Spain -- not during low supply, but at the exact moment solar output was peaking. The issue wasn't a lack of energy, but ...

Spanish energy storage solution provider Full& fast has deployed a microgrid at the La Chimenea experimental farm in Aranjuez, southern Spain. It consists of a portable solar generator installation ...

In Spain, while there is no nationwide mandate requiring the installation of photovoltaic (PV) systems on residential buildings or car parks, certain regional and municipal regulations have ...

As a legacy from Spain's earlier development of solar power, the country remains a world leader in concentrated solar power. Many large concentrated solar power stations remain active in Spain and ...

With 106.1 GW of additional utility-scale solar projects in announced or pre-construction status, Spain could achieve its 2030 solar target by bringing less than a quarter of these existing proposals (24.7 ...

Spanish solar PV generator manufacturer Nomad Solar Energy, a subsidiary of solar power plant project developer Lone Lighthouse, has launched a line of containerized mobile solar PV...

More than 55 GW of solar projects have secured access to the Spanish grid and must be built before the end of June 2025 or risk losing connection rights, according to analysts at S& P ...

Portuguese grid operator Ren, whose system was dragged down by the Spanish outage, made concrete proposals for investments in shock-absorbing equipment in a December 2024 plan.

Over the course of 2024, installed solar photovoltaic power capacity experienced the greatest increase within the peninsular electricity system, adding almost 6,000 MW to the power generation fleet.

But the sunlit uplands of solar have begun to overheat. Spain has built so much solar capacity that at certain

Spanish solar remote power system

times of day it produces far more electricity than it needs. Prices have ...
