The BCA algorithm is used to solve the optimization problem in real time, while the limitations of the distribution system, the photovoltaic inverters and the PHEV are considered.

This paper presents the microgrid in terms of its structures, operation mode, optimal configuration, and other aspects are described, and the optimal configuration model, solution algorithm, and other status ...

By using an improved sparrow search algorithm (ISSA) to optimize the particle filtering algorithm, an improved particle filtering (IPF) algorithm is proposed for the optimal scheduling of microgrids.

Next, we systematically review the optimization algorithms for microgrid operations, of which genetic algorithms and simulated annealing algorithms are the most commonly used.

Next, we systematically re-view the optimization algorithms for microgrid operations, of which genetic algorithms and simulated annealing algorithms are the most commonly used.

To address the issue of high operating costs in microgrids, this study improves upon the traditional Particle Swarm Optimization (PSO) algorithm by optimizing the inertia weight and introducing a compression factor.

The outcome of an island detection can be one of two options: 1) shut down the islanded microgrid by stopping generation (known as anti-islanding), or 2) modify the mode and dispatch of islanded ...

Article Open access Published: 03 February 2026 Cost-effective and sustainable operation of microgrids using Improved Whale Optimization Algorithm Sohayla M. El-Zaher, Aya M. Ahmed, Eman M. ...

The different optimization techniques used in energy management problems, particularly focusing on forecasting, demand management, economic dispatch, and unit commitment, are identified and critically ...

The commonly used algorithm for microgrid optimization is
