Why do solar panels need a tilt mount?

This adjustability implies that your solar panels can remain effective in all the seasons and will adjust depending on the seasonal movement of the sun. By allowing for the best possible angle of tilt for the panels, these mounts must also increase the energy absorption of the panels which ensures greater output from the solar system.

What is a solar panel mounting system?

A solar panel mounting system is the structural support which holds the solar panels and orients them to receive the most direct sunlight possible. Good mounting does not only aid in the stability of the structure but ensures that the panels are tilted at the right degree to enable maximum solar energy intake.

Why do solar panels need a good mounting structure?

Good mounting does not only aid in the stability of the structure but ensures that the panels are tilted at the right degree to enable maximum solar energy intake. Super Solar has developed different types of mounting structures such as ground mounts, roof mounts and adjustable tilt mounts to facilitate the various energy requirements.
