-----

However, those eager to install solar inverters have encountered an unexpected hurdle - an extended waiting period. This article explores the reasons behind the long wait times, highlighting the effects of ...

For some years, researchers have been warning about the increasing risk of blackouts as the share of intermittent renewables rises and spinning turbines, from coal and nuclear ...

SMA Solar Technology will reduce 350 positions worldwide as part of an expanded restructuring program to cut costs and regain competitiveness.

The United States needs to add 206.5 GW of new energy capacity by 2030, with solar expected to supply 73% of those capacity additions. Without solar and storage, America will have an ...

These efforts are intended to improve the long-term capacity of the U.S. solar industry, although they are unlikely to have immediate effects on the current inverter shortage.

The recent residential solar industry downturn in the United States and Europe has required some inverter manufacturers to close down operations and cut jobs.

This article explores why the solar industry is struggling, what it means for the clean energy transition, and how governments and homeowners can adapt. From climate impacts to ...

Around November 15, 2024, a significant number of residential and small-scale solar users across the U.S. began reporting mysterious outages. Their systems, powered by solar ...

In recent weeks, three major western inverter manufacturers - SMA Solar, Enphase and SolarEdge - have reported challenging financial results and job cuts.

## The shortage of solar inverters has been alleviated

Trade and supply-chain frictions have resulted in an acute shortage of solar photovoltaic (PV) equipment in the United States that risks abruptly slowing the rate of solar PV installation.
