OverviewTypesHistoryDifference between rear suspension and front suspensionSpring, wheel, and roll ratesWeight transferOther propertiesSprings and dampersSuspension systems can be broadly classified into two subgroups: dependent and independent. These terms refer to the ability of opposite wheels to move independently of each other. A dependent suspension normally has a beam (a simple "cart" axle) or a (driven) live axle that holds wheels parallel to each other and perpendicular to the axle. When the camber of one wheel changes, the camber of th...
