How much power does a portable power station need?

Small devices like a laptop and coolers tends to need around 60 to 100W of continuous power whereas appliances like fridges can need up to around 800W. So, a large portable power station with a higher output is best for powering large devices, or more devices at once.

How long can a portable power station run?

It all depends on the power station and the device or devices you're charging. As a general rule of thumb, to figure out how long your portable power station can run, divide battery capacity (Wh) by power drawn by the device (W). What is UPS and why do I need it?

Should I buy a 1000 watt power station?

If that is all you need, then save some money by buying a 1,000 watt power station like Anker Solix C1000, which has more than enough power for LED lights and most common devices, and while it has enough power to run a CPAP machine all night we don't recommend it for that use since its fan is noisy.

What is the best home backup power?

If your primary goal is home backup power, step up to the EcoFlow Delta Pro. It is designed specifically for home backup power use, and can be wired directly into your home breaker panel with an optional transfer switch kit. It has an impressive 3.6 kWh power capacity, which can be expanded to up to 25 kWh.
