-----

This Norwegian company is pioneering an approach that employs a multitude of tiny turbines packed together to maximize energy capture. However, it's not just the design that is ...

The Windcatcher is a multi-turbine structure designed to capture more wind power than traditional single-turbine installations. Unlike conventional offshore wind farms, which rely on a few ...

Wind Catching Systems has received an important tick of approval for its enormous 40-megawatt Windcatcher offshore floating wind turbine array, as it prepares to build a full size...

The Wind Catcher's smaller turbines will also be able to take full advantage of high winds, and Wind Catching Systems claims a single Wind Catcher can generate over two times more ...

Portable wind turbines used off-grid and outdoors. Used with Portable Power Stations and battery generators.

"Wind Catcher", a 1,000-ft multi-rotor wind turbine, is ready to go. A Norwegian Greentech company has recently unveiled its new 1,000-foot (324m) tall, floating wind turbine array. Called "Wind...

Norway now has one the most promising developments in this field with the "Wind Catcher,"; a floating turbine towering over 1,000 ft with more than 100 turbine rotors that will float offshore and could ...

But the wind catchers I am writing about today are multiple wind turbine giant arrays that float in the ocean churning out hundreds of Megawatts of energy. Wind Catching Systems is a ...

These traditional turbines were modeled after 17th-century Dutch windmills, but for Norwegian company Wind Catching Systems, they're not quite right for the 21st century. The ...

Wind Catching Systems is developing the Windcatcher - a floating wind solution with a potential to reduce the LCoE of floating wind by focusing on standardization, scalability, improved operations and ...
